Feedo: Intelligent Food Rescue

From surplus to survival, in real time. Bridging the gap between food waste and food insecurity through data-driven logistics and crisis-aware orchestration.

The Gap in Food Redistribution

The Paradox

Food wastage and insecurity coexist in the same urban centres, creating a stark contradiction in our communities.

The Bottleneck

Traditional donation workflows are slow, fragmented, and lack real-time tracking capabilities.

No Unified Coordination

Fragmented communication between donors, NGOs, and volunteers creates inefficiency.

Zero Route Visibility

No visibility into route feasibility or spoilage risk during transit.

Weak Crisis Response

Poor responsiveness to weather or crisis-driven disruptions in supply chains.

Made with GAMMA

End-to-End Orchestration Platform

Feedo is a multi-role ecosystem designed for high-stakes food rescue operations, connecting all stakeholders in a unified, intelligent platform.

Donor Dashboard

Instant listing and "Emergency Flow" triggers for rapid response to surplus food availability.

NGO/Recipient Portal

Ranked feed based on urgency and suitability, ensuring food reaches those who need it most.

Volunteer App

Actionable queue for pickup-to-delivery workflows, optimised for efficiency and speed.

Intelligence-Driven Logistics

Smart Geospatial Discovery

Geocoding and route optimisation with OSRM fallback ensures the fastest, most efficient delivery paths.

Crisis-Aware Prioritisation

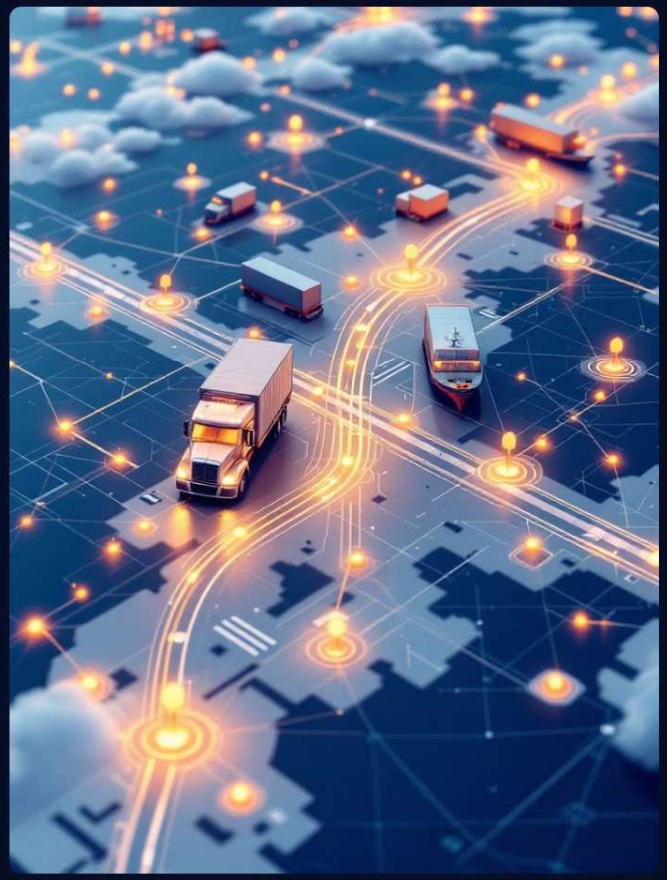
Real-time data aggregation from NASA EONET and OpenWeather ranks survival-first needs automatically based on bad weather conditions or disaster regions.

Food Intelligence

Barcode lookup via Open Food Facts provides product context and shelf-life tracking for perishable items.

Receiver-Centric Matching

Weighted ranking system factors in urgency, spoilage risk, and travel time for optimal allocation.



Made with GAMMA

Modern Tech Stack for Reliability

Frontend

Next.js (App Router), React, TypeScript, Tailwind CSS for responsive, accessible interfaces.

Backend & Real-time

Supabase for database and live event synchronisation across all platform roles.

Geospatial APIs

OpenRouteService for intelligent route calculation and optimisation.

Signals & Alerts

NASA EONET (crisis detection), OpenWeather (conditions), Firebase (push notifications).

Operational Integrity

Cross-role lifecycle event logging and audit trails ensure transparency and accountability.

Made with GAMMA

Beyond Basic Donation Apps

Multi-Role Orchestration

One platform connecting four distinct actors in a single, seamless lifecycle.

Spoilage-Aware Logic

Matching accounts for the "ticking clock" of perishable items in real time.

Crisis Readiness

Integrated emergency signals automatically reprioritise the delivery queue during disasters.

Operational Traceability

Every handover tracked with stage-specific signals for complete visibility.

Validation & Target Results

Current Progress

Core lifecycle logging, volunteer emergency workflows, and crisis-aware feeds are **live and integrated**.

Target Impact

- **30% Faster** donation response time
- **25% Decrease** in food spoilage during transit
- **Real-time Visibility** of high-priority fulfilment during crises

30%

Faster Response

Reduction in donation response time

25%

Less Spoilage

Decrease in food waste during transit
